

RIGO SOSA

INDUSTRIAL AUTOMATION ENGINEER | OT INFRASTRUCTURE | SYSTEMS INTEGRATION

Mulvane, Kansas | (214) 228-1770 | rigososa@icloud.com | linkedin.com/in/rigososa

PROFESSIONAL SUMMARY

Industrial automation and OT/IT integration professional with experience spanning controls engineering, industrial networking, robotics integration, SCADA systems, manufacturing operations, and enterprise infrastructure support across high-volume manufacturing environments.

Experienced supporting automation modernization initiatives involving PLC/HMI development, industrial networking, OT infrastructure, MES/SCADA systems, robotics integration, and manufacturing systems troubleshooting. Proven ability to bridge operations, engineering, and technology teams to improve uptime, operational reliability, and plant-floor performance.

Currently serving as an Embedded Automation Engineer / Technical Lead supporting enterprise manufacturing and operational technology initiatives involving industrial infrastructure, automation integration, manufacturing connectivity, and systems modernization.

Recognized for strong technical troubleshooting, cross-functional leadership, operational support, and the ability to communicate effectively across engineering, operations, project management, and customer environments.

Bilingual in English and Spanish.

CORE COMPETENCIES

Industrial Automation & OT Systems

- Allen-Bradley PLC Programming
- FactoryTalk View Studio
- Ignition SCADA
- Industrial Networking & VLAN Architecture
- Stratix Switch Configuration
- Industrial Ethernet
- OT Infrastructure
- Manufacturing Systems Integration
- Robotics Integration (FANUC & Yaskawa)
- Industrial Troubleshooting
- Process Automation
- Commissioning & Startup Support
- SCADA & HMI Development
- Plant-Floor Systems Support

Technical Leadership & Operations

- Cross-Functional Team Leadership
- Manufacturing Operations Support
- Technical Project Coordination
- Process Improvement
- Systems Troubleshooting
- Stakeholder Communication
- Training & Mentorship
- Operational Support
- Enterprise Systems Support
- Infrastructure Coordination
- Multi-Site Manufacturing Support

PROFESSIONAL EXPERIENCE

E-Tech Group | Embedded Automation Engineer / Technical Lead

Remote | June 2023 – Present

- Lead industrial automation, OT infrastructure, and systems integration initiatives for large-scale manufacturing environments.

- Support automation system design, PLC/HMI development, industrial networking, and robotics integration across enterprise manufacturing projects.
- Collaborate with engineering teams, plant stakeholders, integrators, and project managers to improve operational efficiency, manufacturing connectivity, and system reliability.
- Support OT infrastructure modernization efforts involving industrial networking, VLAN architecture, Stratix infrastructure, manufacturing segmentation, and plant-floor connectivity solutions.
- Recognized with E-Tech Group's Effectiveness Award (2nd Place, 2024) among 120+ engineers for exceptional project execution and over 100% billable utilization.

Key Project Exposure

- Coca-Cola OT infrastructure modernization and manufacturing network standardization initiatives.
- Industrial networking, SCADA integration, robotics support, and operational technology initiatives across multi-site manufacturing environments.

International Automotive Components (IAC) | Controls Engineer

Arlington, Texas | June 2021 – July 2023

- Supported industrial automation, OT systems, and plant-floor integration initiatives within a high-volume automotive manufacturing environment.
- Programmed, supported, and optimized PLC and Ignition SCADA systems to improve production uptime, fault recovery, operational visibility, and manufacturing throughput.
- Performed automation troubleshooting and controls support across robotics, conveyors, sensors, pneumatic systems, hydraulic systems, servo-driven equipment, and automated manufacturing cells.
- Supported industrial network infrastructure including Cisco switch configuration, VLAN segmentation, copper/fiber connectivity, MES integration, and manufacturing communication systems.
- Worked extensively with MES and production tracking systems including barcode scanners, operational data visibility tools, manufacturing web interfaces, and process monitoring systems.
- Supported FANUC robotics, automated material handling systems, and production troubleshooting across manufacturing operations.
- Collaborated with engineering, operations, and maintenance teams to improve cycle times, reduce downtime, optimize fault handling, and increase manufacturing productivity across multiple production lines.
- Promoted internally for technical performance, adaptability, and cross-functional support across automation, manufacturing systems, and operational technology environments.

HCL Technologies | Knowledge Manager / Systems Analyst Trainer

Toyota Financial Services Client | 2020 – 2021

- Collaborated with Toyota Financial Services leadership teams to improve operational workflows, technical support processes, and knowledge management systems within enterprise call center operations.
- Served as part of an Agile/Scrum solutions team responsible for delivering weekly operational improvements, workflow enhancements, and technical support process updates.
- Developed and maintained knowledge articles, training documentation, and support workflows to improve troubleshooting efficiency, onboarding, and issue resolution across enterprise support teams.
- Led training initiatives for support personnel and trainers, helping standardize operational procedures and improve technical support consistency across call center operations.

- Supported ServiceNow-based workflow development and process automation initiatives using HTML, JavaScript, and internal workflow tools to improve support efficiency and documentation management.

Fujitsu Technology Solutions | Tier 3 Systems Analyst

TJ Maxx & GoodSense Retail Infrastructure Support | 2019 – 2020

- Provided advanced technical support and infrastructure troubleshooting for large-scale retail operations supporting TJ Maxx and GoodSense store environments across North America.
- Supported POS systems, scanners, retail network infrastructure, payment systems, and store-level operational technology through remote diagnostics and technical troubleshooting.
- Served as a Tier 3 escalation resource responsible for resolving complex technical issues involving network communication, hardware failures, workstation support, and operational system outages.
- Assisted field technicians and store personnel with system recovery procedures, hardware replacement coordination, connectivity troubleshooting, and operational issue resolution.
- Utilized remote support tools, command-line troubleshooting, network diagnostics, and system analysis techniques to identify root causes and restore operational functionality.
- Improved escalation workflows and outage resolution support across retail infrastructure operations.

EARLY LEADERSHIP & OPERATIONS EXPERIENCE

Held multiple leadership, operations, and regional management roles across telecommunications, automotive, retail, and field operations industries from 1999–2019.

Built and managed multi-state teams, supported operational growth initiatives, led training and onboarding programs, and developed strong leadership, communication, and customer engagement skills that continue to support technical leadership and operational collaboration today.

Previous leadership experience includes:

- | | |
|--|--|
| • Regional Manager Good Help Solutions | • Regional Manager 20/20 Companies |
| • Regional Manager FYE Marketing | • Top Sales Representative Rusty Wallis Volkswagen |
| • General Manager ALDI Foods | • Top Producer Back40 Engineering |

EDUCATION

Western Governors University (WGU)

B.S. Software Engineering Expected Graduation: 2027

My Computer Career (MCC)

Technical Program Graduate | Networking & IT Foundations 2019

AWARDS & RECOGNITION

E-Tech Group Effectiveness Award (2nd Place, 2024)

Recognized among 120+ engineers for exceptional project execution, customer satisfaction, and exceeding 100% billable utilization.
